Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 4, 10 and 15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims recite “under a predetermined rule concerning random.” It is unclear what is meant with the use of the term “random” in the context of the claim limitation. Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1, 3-7, 9-13 and 15 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent App. Pub. 2002/0038337 A1.

As concerns claims 1, 3-5 and 9-11, a server which can freely communicate with a client terminal apparatus and a user terminal apparatus via a network, comprising: a communication section (communication section of server 200) which communicates with the client terminal

Art Unit: 2151

apparatus and user terminal apparatus; a control section (processor, inherent for server computer to have processor) which executes control so as to attach a predetermined code (figure 1, p-code) including a character string to predetermined information in a stage in which the predetermined information is accepted, when the communication section receives the predetermined information transmitted from the client terminal apparatus; and a storage section (figure 109) which associates and stores at least the predetermined code with the predetermined information and a category (figure 103A), and further a user ID with an address (figure 7 and 9) and a reception condition (figure 121) concerning the address, wherein the control section executes the control so as to extract the predetermined code included in an electronic mail (figure 109) as information corresponding to a title (figures 109, 112, 113, 120) of the electronic mail, read the predetermined information corresponding to the predetermined code from the storage section, and return the predetermined information to the address from the communication section via the electronic mail (figures 83, 112, 98B, 108), when the communication section receives the electronic mail transmitted from the user terminal apparatus; and transmit a direct mail to the demander address (figure 31C).

As best understood concerning claims 4, 10 and 15, see above claim 1 and under a predetermined rule concerning random, date designation, and time designation (figures 10 and 44).

As concerns claims 6 and 12, an information providing support method according to claim 5, further comprising executing the control by the control section so as to transmit an HTML (figure 40) source of a predetermined code notice page including the predetermined

Art Unit: 2151

code attached to the predetermined information to the client terminal apparatus via the communication section.

As concerns claims 7 and 13, an information providing support method according to claim 5, further comprising executing the control by the control section so as to transmit an electronic mail including an HTML (figure 40) source of a predetermined code notice page including the predetermined code attached to the predetermined information and a content of the predetermined code notice page to the client terminal apparatus by the communication section.

Allowable Subject Matter

5. Claims 2 are allowed.

6. Claims 8 and 14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

7. The following is a statement of reasons for the indication of allowable subject matter: Claims 2, 8 and 14 as claimed in detail wherein the reception conditions include setting information on a file format for each of the plurality of addresses, disapproval/approval of an attached file, a maximum value of the number of characters, a maximum value of an attached file size, and acceptance/rejection of a direct mail.
